

Ex-No.1

Date:

Comparative study of Low-code development versus traditional application development approaches.

AIM:

To make a comparative study of Low-code development versus traditional application development approaches.

Features:

Features	Traditional App Development	Low-code Development
Definition	Applications are built by writing code manually	App. are built using visual drag-and-drop tools with minimal coding.
Coding Required	High	Low
Development Speed.	Slower	Much faster
Skill Requirement	Professional programming skills	Basic programming knowledge is enough

Customization	Very high	Limited compared to traditional development
Cost	Higher	Lower
Maintenance	More complex	Easier
Scalability	Excellent	Good, but depends on the platform.
Best For	Large, complex, and custom applications	Business apps, workflows, prototypes and internal tools

- Advantages and Disadvantages of Traditional development ::

Advantages:

- * Full flexibility and customization.
- * High performance
- * Better security control
- * Can build any type of application
- * Easier to integrate with complex systems.

Disadvantages:

- * Takes more time to develop.
- * Higher development cost

- * Requires experienced developers.
- * Longer testing and maintenance

Advantages and Disadvantages of Low-code

Advantages:

- * Rapid application development
- * Lower cost
- * Easy to learn
- * Faster testing and deployment
- * Enables non-programmers to build apps

Disadvantages:

- * Limited customization
- * Vendor lock-in
- * Not ideal for highly complex applications
- * Performance optimization may be limited.
- * Licensing costs for some platforms

Result:

Thus, the comparison of traditional and Low Code development has been completed successfully.
