Update App Name

Would you like me to implement any specific feature, such as creating the cost prediction function or adding AI analysis fields to your forms?

AI_Service_Cost_Predictio

Help me implement an AI-assisted service cost estimation feature in my existing Vehicle Service Management app. I already have Vehicle Model, Service Type, and Estimated Service Cost (Currency) fields. Use available Zoho Creator Zia AI features if supported by my account. Do not create a new app. Explain the exact steps and identify any plan limitations.

Cost Estimation Function Added

Created the custom Deluge function "calculate_service_cost" to estimate service costs based on vehicle model, service type, age, and additional services. The function now applies base costs, service multipliers, age adjustments, and fixed fees for add-ons.

Try instructing Zia to 'Create a form to collect customer details'

Responses are AI-generated. Review the information before proceeding.

Deluge

Condition
- if
- else if
- else
- conditional if

Data Access
- add record
- fetch records
- aggregate records
- update record
- update multiple fields
- for each record
- delete records

Miscellaneous
- set variable
- call function
- send mail
- add comment

```
1  float calculate_service_cost(string vehicleModel, string serviceType, float vehicleAge, list:string additionalServices)
2  {
3      // Fetch the base cost for the vehicle model
4      vehicleModelRecord = Vehicle_Models[Vehicle_Model_Name == vehicleModel];
5      if(vehicleModelRecord.isNull())
6      {
7          return 0.0;
8      }
9      baseCost = vehicleModelRecord.Standard_Service_Package;
10     // Define service type factors
11     if(serviceType == "Routine Service")
12     {
13         serviceFactor = 1.0;
14     }
15     else if(serviceType == "Breakdown Repair")
16     {
17         serviceFactor = 1.5;
18     }
19     else if(serviceType == "Accident Repair")
20     {
21         serviceFactor = 2.0;
22     }
23     else
24     {
25         serviceFactor = 1.0;
26     }
27     // Calculate age factor
28     ageFactor = 1.0 + vehicleAge * 0.1;
29     // Calculate additional services cost
30     additionalCost = 0.0;
31     for each  service in additionalServices
32     {
33         if(service == "Car Wash")
```
